Farrez Al Hakim

Fullstack Web Developer

I graduated in Business Management and began learning web development on my own before finally enrolling in a Full Stack Web Development program, which helped me gain hands-on experience with a variety of front-end and back-end technologies that emphasize a practical approach and real-world projects simulating industry scenarios. Additionally, I gained hands-on experience in building robust and scalable web APIs, working with databases, handling authentication and security, implementing efficient server-side architecture, creating responsive and visually appealing user interfaces, integrating APIs, handling user interactions, and optimizing web performance.
